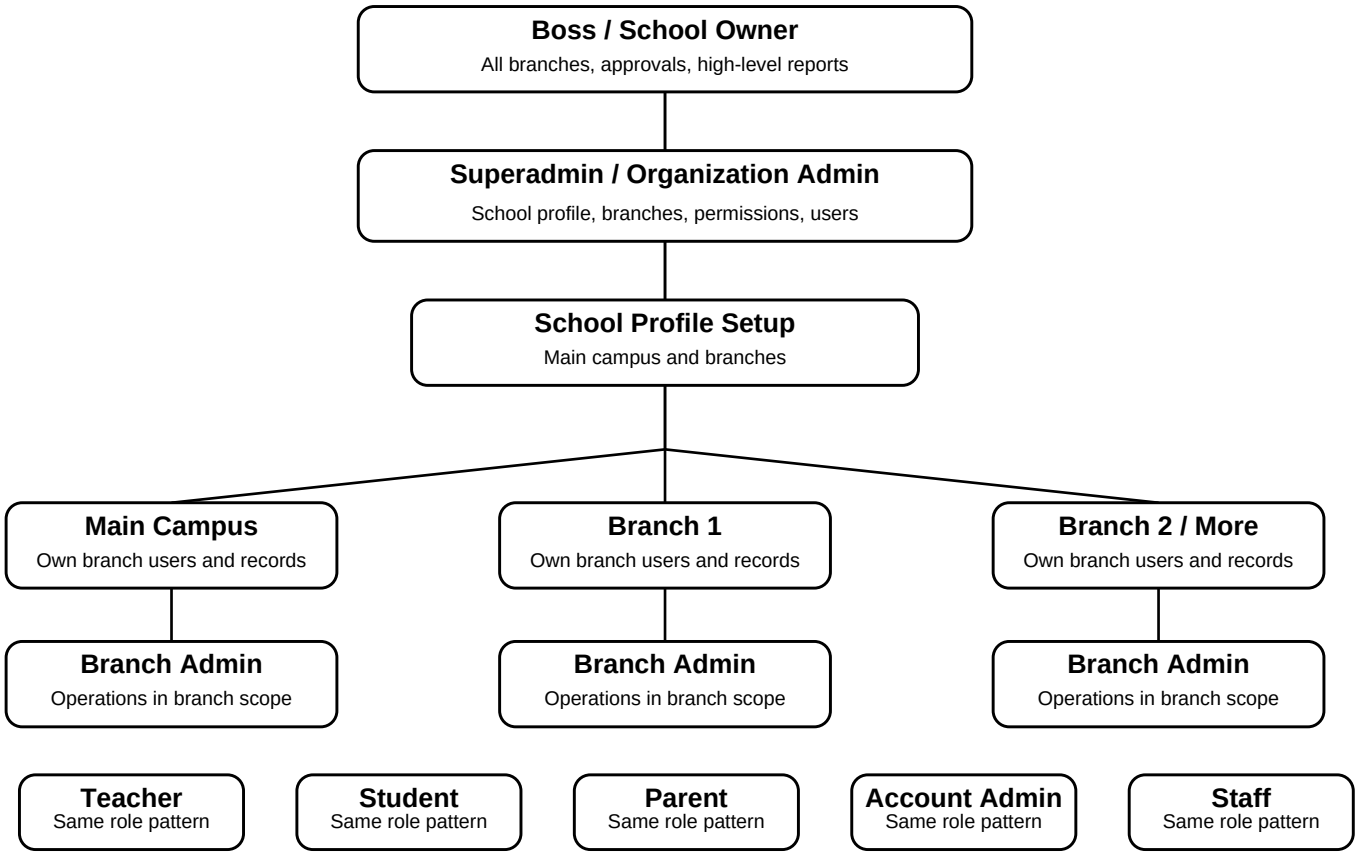
EduManage User Roles, Credentials, and Onboarding Flow

Black-and-white reference document for the school management SaaS role model. This document explains who logs in, who creates whom, and what each user type can do inside the platform.



Core Rule

- Only the first Boss / School Owner account is prepared manually in the database.
- Every other operational user should be created from inside EduManage and receive an email invite link.
- Invite link opens the app, locks the email, sends OTP to that email, then allows password setup.
- Each branch works independently, but follows the same role structure and belongs to one school organization.

Credential and Account Creation Flow

The platform should avoid manually sharing passwords. Admin-level users, teachers, parents, and staff should receive secure invite links and create their own passwords after OTP verification.

User Type	Credential Source	Who Creates This User	Login Setup Flow
Boss / School Owner	Manual first account	Developer / database setup	Manual DB role update, then normal email + password login.
Superadmin	Email invite	Boss	Receives invite link, verifies OTP, sets password, logs in.
Branch Admin	Email invite	Boss or Superadmin	Branch-scoped invite and password setup.
Branch Account Admin	Email invite	Boss, Superadmin, or Branch Admin	Finance-role invite and password setup.
Staff	Email invite	Boss, Superadmin, or Branch Admin	Limited staff invite and password setup.
Teacher	Email invite	Branch Admin	Teacher onboarding sends invite. This is already patterned in the app.
Parent	Email invite	Branch Admin through student onboarding	Parent invite is sent when student is onboarded.
Student	Optional later	Branch Admin	For MVP, student portal login can be added later; student profile exists now.

Invite Flow

- Creator enters full name, profile photo, age, gender, role, email, phone, and branch assignment when needed.
- System creates user profile with no shared password.
- System sends a 24-hour invite link to the user email via SMTP.
- User opens the link, requests OTP, receives OTP in Gmail/Outlook, verifies it, sets password and confirm password.
- After setup, user logs in with email and password and lands on the correct dashboard.

Who Is Responsible for Whom

Role	Can Create / Manage	Scope
Boss / School Owner	Superadmin, Branch Admins, Branch Account Admins, Staff, all organization settings, all branches.	Full organization scope.
Superadmin	School profile, branches, permissions, branch admins, account admins, staff.	Organization scope, below Boss.
Branch Admin	Teachers, students, parents, branch staff, branch account admin, classes, sections, attendance, exams, notices.	Own branch only.
Branch Account Admin	Fee collection, payments, receipts, reminders, fee reports.	Own branch finance scope.
Staff	Assigned operational work only.	Limited branch scope.
Teacher	Assigned classes, attendance, homework, marks, study materials, student performance notes.	Assigned classes only.
Parent	View child profile, attendance, homework, notices, results, fee status and payments.	Own children only.
Student	View own profile, timetable, homework, results, notices, materials, ID card.	Own student profile only.

Role Feature Details

Boss / School Owner

- View all branches
- Overall dashboard
- Approvals
- High-level reports
- Manage superadmin and admin users
- Control organization-level access

Superadmin / Organization Admin

- Setup school profile
- Create and manage branches
- Assign branch admins
- Settings and permissions
- Manage organization users
- View all branch reports

Branch Admin

- Onboard teachers
- Create classes and sections
- Onboard students
- Onboard parents through student records
- Onboard branch staff
- Manage attendance
- Manage exams and results
- Notices, WhatsApp, AI tools
- Timetable setup
- Branch reports

Teacher

- View assigned classes
- Mark attendance
- Create homework
- Enter marks
- Monitor student performance
- Discipline notes
- Use AI tools
- Create study material
- Prepare tests and question papers

Student

- Own profile
- Student ID card
- View timetable
- Homework
- Results
- Study materials
- Attendance view
- Notices

Parent

- View child profile
- Switch between children
- Attendance summary
- Homework view
- Results
- Performance view
- Fees and payments
- Notices
- WhatsApp alert preferences

Branch Account Admin / Finance Staff

- Fee collection
- Payment tracking
- Receipts
- Fee reports
- Due reminders
- Stripe payment status
- WhatsApp fee reminders

Staff

- Assigned branch tasks
- Limited access based on permission
- Support admin operations
- View only allowed records

Recommended Implementation Order

- Add new roles: BOSS, SUPERADMIN, BRANCH_ADMIN, BRANCH_ACCOUNT_ADMIN, STAFF.

- Create a User Management module for Boss, Superadmin, and Branch Admin dashboards.

- Create generic UserInviteToken for admin and staff invite links.

- Reuse the existing SMTP OTP and password setup pattern already used by Teacher and Parent invites.

- Add permission checks so Boss sees all, Superadmin sees organization, Branch Admin sees branch, and finance users see finance-only modules.

- Keep Teacher and Parent onboarding connected to the existing Teacher and Student modules.

Summary

EduManage should have one manually prepared Boss account. After that, every role is created through the application and activated through email invite, OTP verification, and password setup. This gives clean accountability, no password sharing, and branch-level control for a multi-campus school organization.
